Introduction

The Conmee Township Prospecting Project area covered by this report was originally explored for iron. This area is the most eastern part of the Matawin Iron Range. Pyritized magnetite-jasper banded iron formation is commonly found here. Gold mineralization occurs in this area where quartz veins are present in the iron formation, in mineralized shear zones and in felsic and intermediate intrusive rocks.

During a preliminary reconnaissance of the township, I located an outcrop which was very gossanous in appearance due to the high content of iron carbonates. This outcrop represents a mineralized shear zone in gabbroic country rock. Further sampling and investigation of this outcrop revealed the presence of visible gold in quartz veinlets within the iron carbonates. Fire assays of rock material adjacent to the visible gold sample returned assays of up to .19 ounces per ton gold.

Subsequent to this discovery, I staked a block claim of four claim units in the area proximal to the gold showing for further study. Heavy overburden covers the area making traditional prospecting methods difficult as the outcrop exposure is less than one percent. The results of this study indicate that the mineralized zone which carries gold is probably narrow and elongated, as are most of the mineralized shear zones of the immediate area. Sampling of the gabbroic country rock further supports this hypothesis. A program of overburden removal would be very beneficial in determining the true extent of this gold zone.
Location and Access

The Conmee Township Project is located in Northwestern Ontario in Conmee Township of the Thunder Bay Mining Division. The project area is located approximately 90 kilometers west of the City of Thunder Bay. The mining claims covered in this report are T.B. 963102, 964308, 940596, 964307; portions of these now form part of the block claim 1194226. The northern part of block claim 1194226 is most easily accessed by Highway 11-17 from Thunder Bay to Mokomon Road in Conmee Township. Access to the southern portion of claim 1194226 is best accessed from Concession number five from the south or from the Gold Lake area. No roads traverse the property and the claim itself is diagonally divided into two parts by a low, wet marshlands. Each of the two parts are accessible on foot from Mokomon Road, but the traverse across the marsh dividing the two parts is best made when it is frozen.

Gold Lake is quite close to the study area and may be used by float-equipped aircraft.

An alternate route of access can be made by highway # 102 (Dawson Road) which runs through Kaministiquia then turning at Sistonens' Corner and following highway 11-17 east three kilometers. Some of the bush roads in Adrian Township in the east portion may be of some assistance in gaining access to the most westerly portion of the study area, but this is not recommended due to the poor condition of the bush roads (winter access roads).
Geology

The project area is near the Abitibi (Shebandowan Section)-Quetico subprovincial boundary. The general area is underlain by rocks of Archean age and are covered to a great extent by Pleistocene and recent deposits. Some of this area had been mapped by T.L. Tanton in the 1920's. Carter, 1984 describes the study area as Keewatin-type metavolcanics, consisting predominantly of a tightly folded sequence of ultramafic, mafic, and intermediate flows. The study area forms the most easterly portion of the Mattawin Iron Formation. Much of the study area is composed of gabbroic rock and extensive zones of jasper-magnetite banded iron formation. The Thunder Lake fault and the Mokomon Fault are the major faults of the area.

At least three other gold occurrences are known in this area, one of which is associated with the intrusion of a granitic stock in the near vicinity. One of these other occurrences was also a visible gold showing. Gold reserves of undisclosed tonnage and grade are also evident here. Copper, silver and molybdenum are also known to occur in the area.

Regolith from the immediate study area show the presence of Timiskaming type deformed conglomerates and chemical metasediments. Samples of banded iron formation with injected massive sulphides have been found in the area which have not been analyzed for their economic potential.
Work Done

Additional intensive traverses, hand stripping and rock sampling was performed in the vicinity of the previous visible gold showing. More rock samples were taken for visual analysis with a 16 X hand lense from various locations throughout the study area. Fire assays were performed on the best mineralized samples.

A further attempt was made throughout the area to try to locate any further outcrops of material similar to that of the shear zone. A focused attempt was made to locate any mineralized regolith with the aid of a sensitive metal detector. Tracing of surface float has been used in the past to help locate ore bodies. A baseline was set up as a reference line for field data.

Results and Recommendations

Traverses of the study area indicate that bedrock exposure here is of very limited extent, typically less than one percent exposure. The highest assay from the gold zone was .19 opt. Au and a visible gold sample was taken from an outcrop of limited extent. Rock units adjacent to the visible gold showing do not run high gold values. The country rock gold values are typically about 35 ppb Au. Rock sampling of the surrounding area revealed gabbroic rocks which are poorly mineralized.

Previously slabbed and polished regolith from the shear area show hematized quartz veins filling fractures around clasts of altered mafic material (probably gabbroic). The dimensions of the
The shear zone itself were undeterminable at this time due to heavy overburden. There is a strong possibility that the shear zone trends in a similar direction, subparallel to the Thunder Lake Fault. Contours from magnetometer surveys tend to show somewhat conflicting information for the trend of the stratigraphy. However, the gabbroic material in the shear may suggest that the shear postdates both the banded iron formation and the gabbroic intrusions. The intimate association of the auriferous quartz veinlets with the iron formation is apparent. The quartz veinlets may be located along the fractured fold noses of the deformed iron formation stratigraphy. Nearby outcrops show extensive fracturing with hematite veinlets infilling the fractures.

In the absence of foliage in the early spring, I was able to visually locate a minor fault which trends south-south west for nearly one quarter mile. This fault intersects the location of the visible gold showing. Further inspection of this feature is warranted. (The VLF survey that I had proposed was intended to locate the trend of this feature. The fault strike is traceable as a slight depression along the ground.) Further work in the way of overburden removal would be beneficial to further development of this gold showing.

MINING RECORDER
Ministry of Northern Development and Mines
435 James Street South
Suite B003
Thunder Bay, Ontario
P7E 6E3

Dear Sir/Madam:

RE: APPROVAL OF ASSESSMENT WORK SUBMITTED FOR PROSPECTING ON MINING CLAIM TB1194226 IN CONMEE TOWNSHIP

A Notice of Deficiency was not issued on this Report of Work prior to the 90 day deemed approval date and as outlined in subsection 6(5) of the Mining Act Regulations this Report of Work is deemed approved as of JUNE 2, 1993. The Assessment credits are as listed on the attached Assessment Work Credit form.

Please indicate this approval on your records.

If you require further information please contact Lucille Jerome at (705) 670-5855.

Yours sincerely

Ron C. Gashinski
Senior Manager, Mining Lands Section
Mining and Land Management Branch
Mines and Minerals Division

cc: Resident Geologist
Thunder Bay, Ontario

**Report of Work Conducted After Recording Claim**

**Mining Act**

Personal information collected on this form is obtained under the authority of the Mining Act. This information will be used for correspondence. Questions about this collection should be directed to the Provincial Manager, Mining Lands, Ministry of Northern Development and Mines, Fourth Floor, 158 Cedar Street, Sudbury, Ontario, P3E 6A5, telephone (705) 670-7264.

**Instructions:**
- Please type or print and submit in duplicate.
- Refer to the Mining Act and Regulations for requirements of filing assessment work or consult the Mining Recorder.
- A separate copy of this form must be completed for each Work Group.
- Technical reports and maps must accompany this form in duplicate.
- A sketch, showing the claims the work is assigned to, must accompany this form.

**Recorded Holder(s):**

Credits you are claiming in this report may be cut back. In order to minimize the adverse effects of such deletions, please indicate from which claims you wish to prioritize the deletion of credits. Please mark (✓) one of the following:

1. ☐ Credits are to be cut back starting with the claim listed last, working backwards.
2. ☐ Credits are to be cut back equally over all claims contained in this report of work.
3. ☐ Credits are to be cut back as prioritized on the attached appendix.

In the event that you have not specified your choice of priority, option one will be implemented.

Note 1: Examples of beneficial interest are unrecorded transfers, option agreements, memorandum of agreements, etc., with respect to the mining claims.

Note 2: If work has been performed on patented or leased land, please complete the following:

I certify that the recorded holder had a beneficial interest in the patented or leased land at the time the work was performed.  Signature

Date
Personal information collected on this form is obtained under the authority of the Mining Act. This information will be used to maintain a record and ongoing status of the mining claim(s). Questions about this collection should be directed to the Provincial Manager, Mining Lands, Ministry of Northern Development and Mines, 4th Floor, 159 Cedar Street, Sudbury, Ontario P3E 6A5, telephone (705) 670-7264.

</tbody>
</table>

Note : Le titulaire enregistré sera tenu de vérifier les dépenses demandées dans le présent état des coûts dans les 30 jours suivant une demande à cet effet. Si la vérification n'est pas effectuée, le ministre peut rejeter tout ou une partie des travaux d'évaluation présentés.

Filing Discounts

1. Work filed within two years of completion is claimed at 100% of the above Total Value of Assessment Credit.
2. Work filed three, four or five years after completion is claimed at 50% of the above Total Value of Assessment Credit. See calculations below:

\[
\text{Total Value of Assessment Credit} \times 0.50 = \text{Total Assessment Claimed}
\]

Certification Verifying Statement of Costs

I hereby certify:

that the amounts shown are as accurate as possible and these costs were incurred while conducting assessment work on the lands shown on the accompanying Report of Work form.

that as (Recorded Holder, Agent, Position in Company) I am authorized

to make this certification

Remises pour dépôt

1. Les travaux déposés dans les deux ans suivant leur achèvement sont remboursés à 100 % de la valeur totale susmentionnée du crédit d'évaluation.
2. Les travaux déposés trois, quatre ou cinq ans après leur achèvement sont remboursés à 50 % de la valeur totale du crédit d'évaluation susmentionné. Voir les calculs ci-dessous.

\[
\text{Valeur totale du crédit d'évaluation} \times 0.50 = \text{Evaluation totale demandée}
\]

Attestation de l'état des coûts

J'atteste par la présente:

que les montants indiqués sont le plus exact-possible et que ces dépenses ont été engagées pour effectuer les travaux d'évaluation sur les terrains indiqués dans la formule de rapport de travail ci-joint.

Et qu'à titre de (Titulaire enregistré, représentant, poste occupé dans la compagnie) je suis autorisé

to faire cette attestation.
